1. SCIENTIFIC OBJECTIVES

The objective of the cruise was to maintain a collection of hydrographic and biogeochemical data at the Hawaii Ocean Time-series (HOT) stations. Four stations were to be occupied during the cruise, in the following order:

1) Station 1, referred to as Station Kahe, is located at 21° 20.6'N, 158° 16.4'W and was to be occupied on May 16th for about 2 hours.
2) Station 2, referred to as Station ALOHA, is defined as a circle with a 6 nautical mile radius centered at 22° 45'N, 158°W. This is the main HOT station and was to be occupied during May 17th, 18th, and 19th.
3) Station 50, the site of WHOTS-9 Mooring (anchor position 22° 46.071'N 157° 53.956'W) was to be occupied on May 19th for about one hour.
4) Station 6, referred to as Station Kaena, is located off Kaena Point at 21° 50.8'N, 158° 21.8'W and was to be occupied on May 19th for approximately 3 hours.

Upon arrival to Station Kahe a 1000 lb. weight-test cast to 1000 m, one CTD cast to 1000 m, and a Hyperpro cast were to be conducted on the afternoon of May 16th. The single CTD cast was to be conducted to collect continuous profiles of various physical and chemical parameters. Water samples were to be collected at discrete depths for biogeochemical measurements. After these operations were satisfactorily completed, the ship was to proceed to Station ALOHA.

Upon arrival to Station ALOHA, the free-drifting sediment trap array was to be deployed. The sediment trap array was to stay in the water for about 52 hours. This was to be followed by a 200 m CTD cast to collect water for incubation experiments, and a 1000 m CTD cast for preparation of the Primary Productivity Array. This cast was to be followed by the deployment of the free-drifting Primary Productivity Array to incubate in situ for 12 hours. A full-depth (~4740 m) CTD cast was to be conducted after the deployment of the Primary Productivity Array, followed by 1000 m CTD casts at strict 3 hour intervals for at least 36 hours for continuous and discrete data collection, ending with another full-depth CTD cast at 2300 on May 19th.

Another free-drifting array (Gas Array) was to be deployed for 24 hours for incubation experiments on May 18th. The Gas Array was to be recovered on May 19th.

A plankton net was to be towed between 1000-1400, and 2200-0200 for 30 minute intervals on May 17th and May 18th at Station ALOHA.

The Hyperpro was to be deployed for approximately 45 minutes near noontime on May 16th, 17th, and 19th to collect three profiles during each deployment.
A package including a Wet Labs AC9, a Chelsea Fast Repetition Rate Fluorometer (FRRf), a SeaBird Seacat, and a LISST particle size and distribution analyzer was to be used to profile the upper 200 m at Station ALOHA in the early morning and around noon on May 19th.

A trace metal free sample was to be collected by the ATE sampler on May 18th at Station ALOHA.

After the 36 hour burst period of CTD work at Station ALOHA was accomplished, the ship was to transit to recover the floating Gas Array and the Sediment Trap Array on the morning of May 19th.

After recovering the arrays, the ship was to transit to Station ALOHA to conduct ACS/AC9/FRRf/LISST casts, and Hyperpro casts, after which the ship was to transit to Station 50 to conduct a one-hour 200 m CTD yo-yo cast.

After the 200 m CTD yo-yo cast, an APEX profiling drifter was to be deployed.

Once operations at Station ALOHA were complete, the ship was to transit to Station 6, referred to as Station Kaena where a near-bottom CTD cast (~2500 m) was to be conducted to collect salinity and chlorophyll samples for calibration.

After Station Kaena operations were complete, the ship was to transit back to Snug Harbor.

The following instruments were to collect data throughout the cruise: shipboard ADCP, thermostalinograph, $f\text{CO}_2$ system, underway fluorometer and the meteorological suite.

3. GENERAL SUMMARY

The vessel was diverted from Station Kahe (Station 1) due to undisclosed Navy operations in the area. The operations planned for Station 1 were relocated to 21° 20.6’N, 158° 16.4’W (Station 10), which is approximately 3 nautical miles WSW of Station 1.

Operations at Station ALOHA were conducted as planned.

One 1000 m CTD cast was completed at Station Kahe. Two near bottom CTD casts, one 1700 m CTD cast, twelve 1000 m CTD casts and one 200 m cast were conducted at Station ALOHA. One 200 m yo-yo CTD cast was completed near the WHOTS mooring (Station 50) with five cycles completed. One near bottom cast was completed at Station Kaena.

The trawl winch with the 0.681 wire and the A-frame were used for CTD operations.

The Sediment Traps, Primary Productivity Array and Gas Array were all deployed and recovered successfully. All three arrays drifted NNW of their respective deployment locations.

Six net tows for the core HOT zooplankton collection were completed successfully; three during the day, and three during the night.

Hyperpro casts (3 cycles each) were conducted on May 16th, 17th and 19th.

The optical package ACS/AC9/FRRf/LISST was deployed four times on May 19th, two back-to-back deployments in the early morning, and two at around noon.

The ATE sampler was sent for repair and was not available in time for this cruise.

One APEX profiling drifter was deployed at 22° 44.14’N, 157° 55.57’W.

The underway thermosalinograph, fluorometer and pCO2 system as well as the ship’s meteorological suite ran without interruption during the cruise. The broad band/narrow band Ocean Surveyor ADCP and the Workhorse ADCP were working correctly during the cruise.

Winds were from the east early in the cruise at about 15 kt, eventually decreasing in intensity to about 7 kt before shifting to 12 kt northerlies in the very early morning of May 19th.

4. R/V Kilo Moana OFFICERS AND CREW, TECHNICAL SUPPORT

The R/V Kilo Moana continues to maintain very good ship support for our work. Captain Rick and the ship’s crew showed enthusiasm, concern, and dedication to our scientific mission.

Technical support during this cruise was very good. OTG personnel were available to assist in our work during the cruise.
